

New Standards for Smoke

Nevada now requires that heavy duty diesel vehicles meet tiered opacity standards set by the year of engine manufacture. Make sure your fleet complies!

Engine Year	Opacity
1991 or Newer	-- 40%
1977 to 1990	-- 55%
1970 to 1976	-- 70%

The exhaust plume must not block more than the listed percentage of light passing through it. These new opacity standards are in effect as of January 1, 2003. Engine families which have been exempted by the California Air Resources Board are also exempt in Nevada.
